

## **Seed Collection and Propagation Guide for Kuranda Envirocare**

This guide is being developed by Druce Horton and other volunteers at the Envirocare nursery.

It contains information on the target species list. This includes:

- flowering months (derived from local observation)
- location of suitable collection trees (incl. GPS co-ords)
- photos to assist with positive identification by leaf, flower and fruit
- trialled and untested methods of treating the seed prior to sowing
- anecdotal information on successful propagation of seeds
- germination rates and times

A draft copy is available at the nursery. We wish to make this guide available on the website once it has been completed and expect to do so later this year.
